

ABDUR RAHEEM SHAIKH

Full Stack Developer | AI/ML Engineer

Lahore, Pakistan | +92 334 0591551 | abdurraheemshaikh155@gmail.com
[GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Full-stack developer and AI/ML engineer with expertise in building scalable web applications and intelligent systems. Proficient in modern JavaScript frameworks, Python backend development, and cutting-edge AI technologies including LLMs, RAG systems, and computer vision. Proven track record delivering production-ready applications with clean architecture, from real-time sign language recognition to AI-powered career platforms.

EDUCATION

Bachelor of Science in Computer Science

Expected Graduation: 2026

Relevant Coursework: Generative & Applied AI, Web Development, Database Systems, Data Structures & Algorithms, Software Engineering, Computer Networks, Operating Systems

TECHNICAL SKILLS

AI/ML & Generative AI: LangChain, OpenAI API, RAG Systems, FAISS, Pinecone, Vector Databases, CNN, MediaPipe, TensorFlow, Scikit-learn, Pandas, NumPy

Frontend Development: React.js, JavaScript (ES6+), HTML5, CSS3, Redux, Axios, Responsive Design, Component Architecture

Backend Development: FastAPI, Python, Node.js, Express.js, RESTful APIs, JWT Authentication, PostgreSQL, MongoDB, SQL

DevOps & Cloud: Docker, Docker Compose, Kubernetes, AWS (EC2, S3, IAM), CI/CD (GitHub Actions), Terraform

Development Tools: Git/GitHub, VS Code, Postman, npm, pip, Agile Methodologies, SDLC Documentation

Additional: C++, Java, Microservices, Web Scraping, OpenMP, MPI, Network Engineering (Cisco, TCP/IP)

PROFESSIONAL EXPERIENCE

Python Developer Intern | Netsol Technologies

June 2025 – July 2025

- Developed and deployed full-stack web application using FastAPI backend and React.js frontend, serving multiple concurrent users in production environment
- Implemented secure JWT authentication system with user registration, login functionality, and protected API routes
- Built RESTful APIs with comprehensive error handling, input validation, and standardized response formatting
- Integrated frontend and backend using Axios for efficient HTTP requests, asynchronous state management, and data synchronization
- Collaborated with development team on code reviews, deployment strategies, and backend performance optimization

Lab Demonstrator | Computer Networks Course

Academic Year

- Mentored students in network configuration, protocol implementation, and systematic troubleshooting techniques
- Demonstrated practical applications of TCP/IP stack, routing protocols, DHCP configuration, and NAT concepts
- Guided students through hands-on Cisco networking labs and real-world network scenarios

FEATURED PROJECTS

- **VoxJob — AI Job Discovery Platform (Final Year Project)**
Node.js, FastAPI, React, PostgreSQL, Pinecone, RAG, Docker, Kubernetes
 - Built conversational AI job platform using LLMs and RAG for intelligent matching and career guidance
 - Implemented resume analysis, skill gap detection, and vector search with microservices architecture
- **Real-Time Sign Language Recognition**
Python, TensorFlow, CNN, MediaPipe, OpenCV
 - Developed real-time ASL detector using MediaPipe hand tracking and custom CNN classifier
 - Built complete pipeline: dataset generation, model training, and live webcam inference
- **LLM Document Query Assistant (RAG)**
Python, LangChain, FAISS, OpenAI API, FastAPI
 - Built RAG system for intelligent PDF querying with semantic search and sub-second response times
- **Eventopia — Microservices Event Platform**
React, Node.js, FastAPI, PostgreSQL, MongoDB, RabbitMQ, Docker
 - Developed microservices event management system with async messaging and containerized deployment
- **AstraHR — Payroll & Leave Management**
React, Node.js, FastAPI, PostgreSQL
 - Built full-stack HRMS with payroll automation, leave workflows, and role-based dashboards using Agile
- **Real Estate Marketplace**
React, FastAPI, PostgreSQL, Docker, JWT
 - Created platform with secure authentication, advanced search, and role-based access for multi-user types
- **AI-Powered TORCS Simulator**
Python, Neural Networks
 - Developed self-driving controller using feedforward NN for real-time steering and throttle decisions
-

CERTIFICATIONS & ACHIEVEMENTS

- Completed software development internship at Netsol Technologies with commendation for project delivery and code quality
- Active contributor to open-source projects on GitHub, demonstrating collaborative development skills
- Strong problem-solving abilities with competitive programming experience in C++ and Java
- Proficient in parallel computing technologies (OpenMP, MPI) with focus on performance optimization
